1. Introduction

➢ Purpose

The purpose of the Faculty of Technology Student Management System (FOT-LMS) Software Requirements Specification (SRS) is to describe the main functionality of our Student Management System clearly and concisely. Also, manage student details, attendance, marks, and results for students at the Faculty of Technology.

This system is designed as a web-based application that integrates with a MySQL database to manage student records for the Faculty of Technology. It will handle functionalities like storing student details, calculating attendance and grades, and displaying results. It will also offer different access privileges based on user roles.

2. The Scope of FOT – LMS

This FOT-LMS will facilitate:

- Manage the students registration
- Course management
- Manage attendance and exam marks of students
- Displaying eligibility and grades based on university by-laws.
- Allowing different user roles access to specific functions of the system based on privileges.

3. User Characteristics of FOT-LMS

- Admin: Full access to all functionalities and permissions, including managing users and data.
- Dean: Full access to all data but cannot manage users.
- Lecturer: Can manage course-related data such as student marks and attendance.
- Technical Officer: Manages attendance records.
- Student: Can only view their attendance, marks, and results.

4. System Features

➢ Users

- There are five user types in the system with different levels of access and privileges.
- (Admin, Dean, Lecturer, Technical officer, Student)
- Each user should have user details (such as NIC Number, Name, Email, etc…) and roles (Admin, Dean, Lecturer, Technical Officer, Student).

➢ Student

- Each student should have a student ID, student state (proper, repeat), and other details can view within users details.
- New students can register as new students and also existing students can update existing details.
- Each student can view student details, courses enrolled, attendance.

➢ Lecturer

- Each Lecturer should have lecturer ID, lecture name, contact information.
- Update existing lecturer information.

- View lecturer information

➢ Department

- Department should have a department ID, department name.

- Update existing department information.

- View full details about department.

➢ Course

- Each course should have course code, course name, curse status, course week and course credit.
- Add courses, update existing courses.
- View details about course. (assigned lecturers, enrolled students)

➢ Attendance

- Record attendance for both theory and practical sessions.
- Individual student attendance can be viewed also course unit.

➢ Exam Marks

- Exam Marks should be associated with a specific course unit and student.

- Added all Exam Marks (Mid Exam Theory and Practical, End Exam Theory Practical)

- Can view other students marks (Quiz and Assessment)

➢ Medical

- Students can submit medical and each medical should have medical ID.

- Can view associated medical submissions with specific students.

5. System Requirements

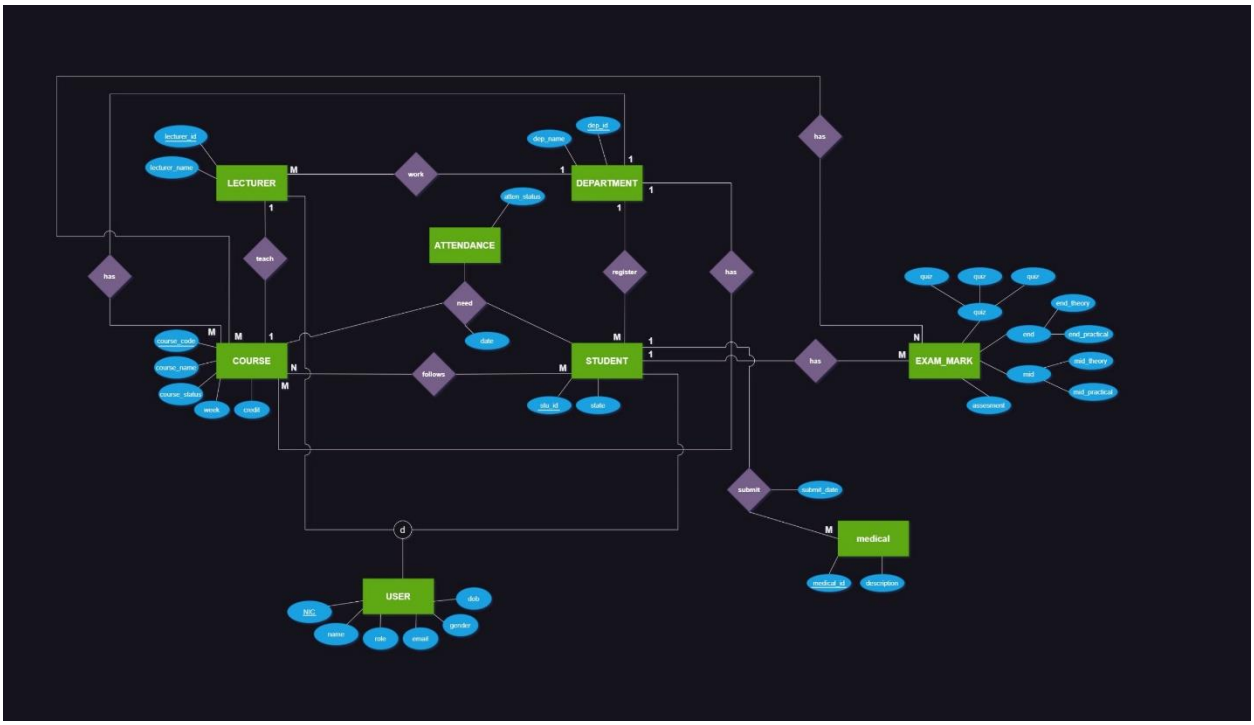
- The system should allow the Admin to manage all user accounts and their privileges.

- Lecturers should be able to input and update marks for all students.

- Students should be able to view their own attendance, marks, and eligibility.

6. System Models

Entity Relationship (ER) Diagram



7. Constraints

- The system will be developed using MySQL.
- The system must store course details based on the timetable for Level 1, Semester 2.
- Grades and eligibility calculations must follow the faculty by-laws.

Thank You!
